Project 3 – Milestone 1

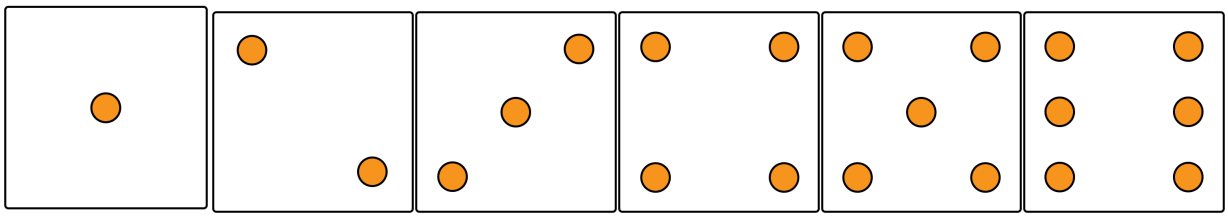
For milestone 3 I hope to further create my dice app game. I would like to work in IOS for this project instead of android. I hope to further reach my end goal that was for project two. I ran into a few problems that hindered my completion of creating the dice game 4, 5, 6. I would like to make the game more functional and aesthetic. I will have more time with this edition due to my completion of other courses this semester.

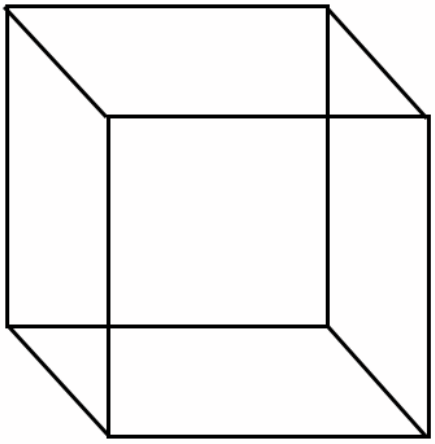
I have already made the mock up pictures using Invision. This mock-up was the intetention for my last app. I would like to achieve all the goals this time around with clean design.

https://projects.invisionapp.com/d/main#/projects/boards/4912400

Furthermore, this time around I will need certain formulas that can calculate highest score, Number of players, number of rolls completed, winning score, how many rounds, etc.

Included are the certain assets that I have gathered.





DICE
